HIGOR VASQUES

PRODUCT MANAGER · B.SC. PHYSICS, UNICAMP

A builder by nature, always pulled toward first principles. As a physicist, I designed and fabricated photonic devices at the frontier of integrated optics. As a product manager, I use user research, data analysis and experimentation to build features, products and experiences.

EXPERIENCE

Justos — 02/2025 – Present

SUSEP-licensed auto insurer selling through brokers

Product Manager — 12/2025 – Present

- **Revenue growth.** Discovery, design and staged launches for new segments and policy renewal flow. Redesigned the policy ownership definitions, designed main driver endorsement, company-owned and commercial-use acquisition flows.
- **Regulatory process**. Turned new SUSEP and Insurance Law requirements into product: the SRO v3 registry integration and the suspension flow for lapsed annual policies.
- **AI-built products.** Shipped a policyholder web portal and migrated the partner portal off Retool before its contract renewed, end to end with Claude Design and agentic coding.

Product Manager Intern — 02/2025 – 11/2025

- **Annual-policy CRM.** Planned and implemented the renewal journey in Customer.io, from trigger events to email and WhatsApp flows for each stage.
- **LLM chatbot retention.** Built self-service flows for the customer LLM chatbot: claim and policy status lookup, a no-code knowledge-base update flow for CX, and contact-reason classification to measure impact. Overall +9 p.p. improvement in retention after the projects.

University of Campinas — 09/2022 – 09/2024

Integrated photonics research · CNPq research grants

Undergraduate Researcher — 09/2022 – 09/2024

- **Quantum key distribution in lithium niobate.** Designed and simulated the chip's building blocks (Mach-Zehnder interferometers and optical delay lines), fabricated components with 100 nm features in thin-film lithium niobate, and assessed the protocol's feasibility on the platform.
- **Frequency doubling in gallium arsenide**. Fabricated micron-scale GaAs structures for second-harmonic generation through semi-quasi-phase matching, and automated the control of legacy lab equipment.

EDUCATION

University of Campinas (UNICAMP) — 2021 – 2025

B.Sc. in Physics · Thesis: "Feasibility of Time-Bin Encoding with Delay Lines in Quantum Key Distribution Protocols on Lithium Niobate Photonic Circuits"

SKILLS

Product
Discovery and user research, PRDs, metric design, A/B testing with power analysis, CRM planning and implementation, staged rollouts

Data and code
SQL, Python (data analysis, visualization, simulation), Git
agentic coding, Looker, Amplitude

Product tools
Customer.io, Zendesk, Figma, Claude Design, Notion, Linear, MS Office & Clarity, Google Workspace

Simulation and design
Ansys Lumerical, COMSOL Multiphysics, KLayout

Lab and fabrication
Electron-beam lithography, etching, photolithography, profilometry, experimental data analysis

Domain
Auto insurance, SUSEP regulation, integrated and nonlinear optics

AWARDS

XIV International Physicists' Tournament — 05/2022

2nd place with the Brazil team. Eight months solving open physics problems in theory and experiment, then debating the solutions in the competition.

LANGUAGES

Portuguese (native)
English (fluent)
